

Automotive (Tires, Fluids, Batteries)

Small Effort: Recycle your automotive wastes correctly. Check with your service station.

BIG IMPACT

Vehicle maintenance for “Do-it-Yourselfers” saves money – just remember it’s important to properly recycle. Automotive wastes should NEVER be put in curbside or community recycling containers. Many services stations will take items for recycling that SHOULD NOT go in the garbage.

- 1. Save money.** Do-it-yourself auto repairs and maintenance can save you money.
- 2. Protect the environment.** Taking responsibility for your fluids, filters, tires, and batteries protects the environment, and keeps hazardous and potentially toxic materials out of the landfill.
- 3. Convenience.** Many service stations charge a small fee for recycling, because there is a cost to them for disposal. Using their recycling service is very convenient.

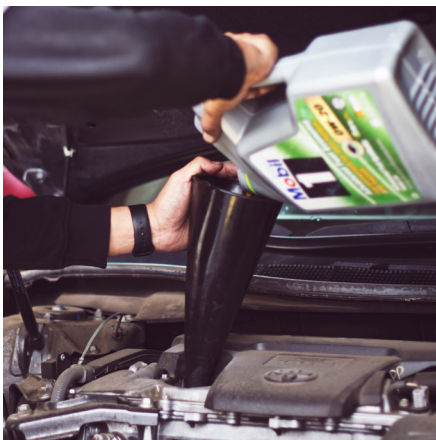

Other than contacting a local service station, the following options are available:

Tires

Take to the Lyon County Regional Landfill.

Motor Oils/Fluids (small amounts)

Take to the Lyon County Household Hazardous Waste (HHW) facility. If you have containers with good product still inside those can also be taken to the HHW facility for possible reuse by others with a need.

Oil Filters

The Lyon County Regional Landfill can collect oil filters.

Batteries

Take vehicle batteries (from all vehicles) to the HHW facility. You might also want to check with a local metal recycler.

Contact: Lyon County Household Hazardous Waste Facility
